WHY COBBLE AI?

- **The Problem:** Generic AI often gives flat, out-of-context answers that don't match your course material.
- **The Solution:** Cobble extracts the specific tone and knowledge from your professor’s actual course notes.
- **The Result:** You get a 24/7 tutor that explains concepts exactly the way they’ll appear on your exam.

THIS MONTH'S HIGHLIGHTS

1 Billion Tokens Analyzed

Our LLM is now powered by over 1 billion high-quality educational tokens. This scale enables deep statistical learning and precise factual reasoning, moving far beyond standard, noisy web data.

968k+ Curated Documents

We’ve indexed a massive library of 968,670 discrete documents filtered for dense educational value. By using curated content, we’ve drastically reduced misinformation and "AI noise" in student responses.

Zero-Latency HDFS Integration

Our new Hadoop Distributed File System (HDFS) architecture ensures high-throughput data streaming. Even with a 2.90GB dataset, students experience instant response times during peak study sessions.

PLATFORM UPDATES

PROFILE STYLE EXTRACTION

Professors can now upload course notes (PDF, DOCX, TXT) and let Cobble AI extract their unique teaching tone and structure in seconds.

LARGE-SCALE KNOWLEDGE BASE

We’ve successfully indexed over 1,000,180,358 high-quality educational tokens, providing deep factual reasoning for every student doubt.

ACTIONABLE STUDENT DATA

Our new heatmap feature identifies topics needing review, allowing professors to send nudges or export detailed PDF progress reports.

PROFESSOR SPOTLIGHT

DR. SANJAY KUMAR

Leading project evaluation and core problem definition.

YOGESH CHAUDHARI

Managing HDFS infrastructure for fast, scalable AI streaming.

DR JAIDEEPSINH RAULJI

Guiding our 1-billion-token knowledge base for educational accuracy
